

## Set Up VPN on Mac OS10

1. Under System Preferences, select Network

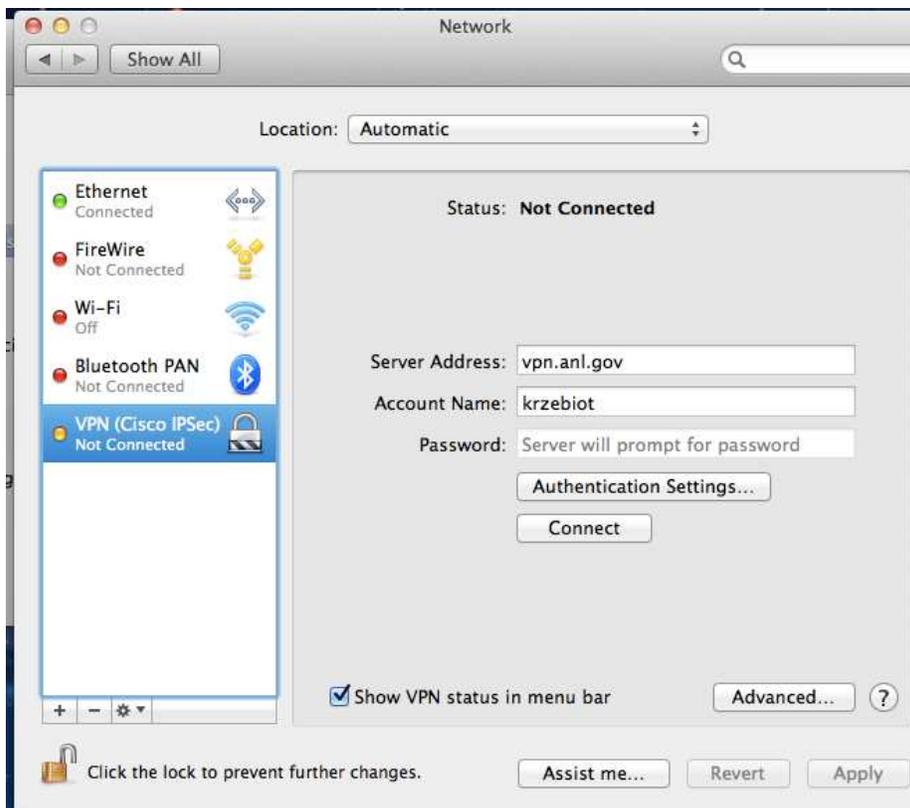

2. Click on the plus sign (+) at the bottom left of the screen for a new network connection.

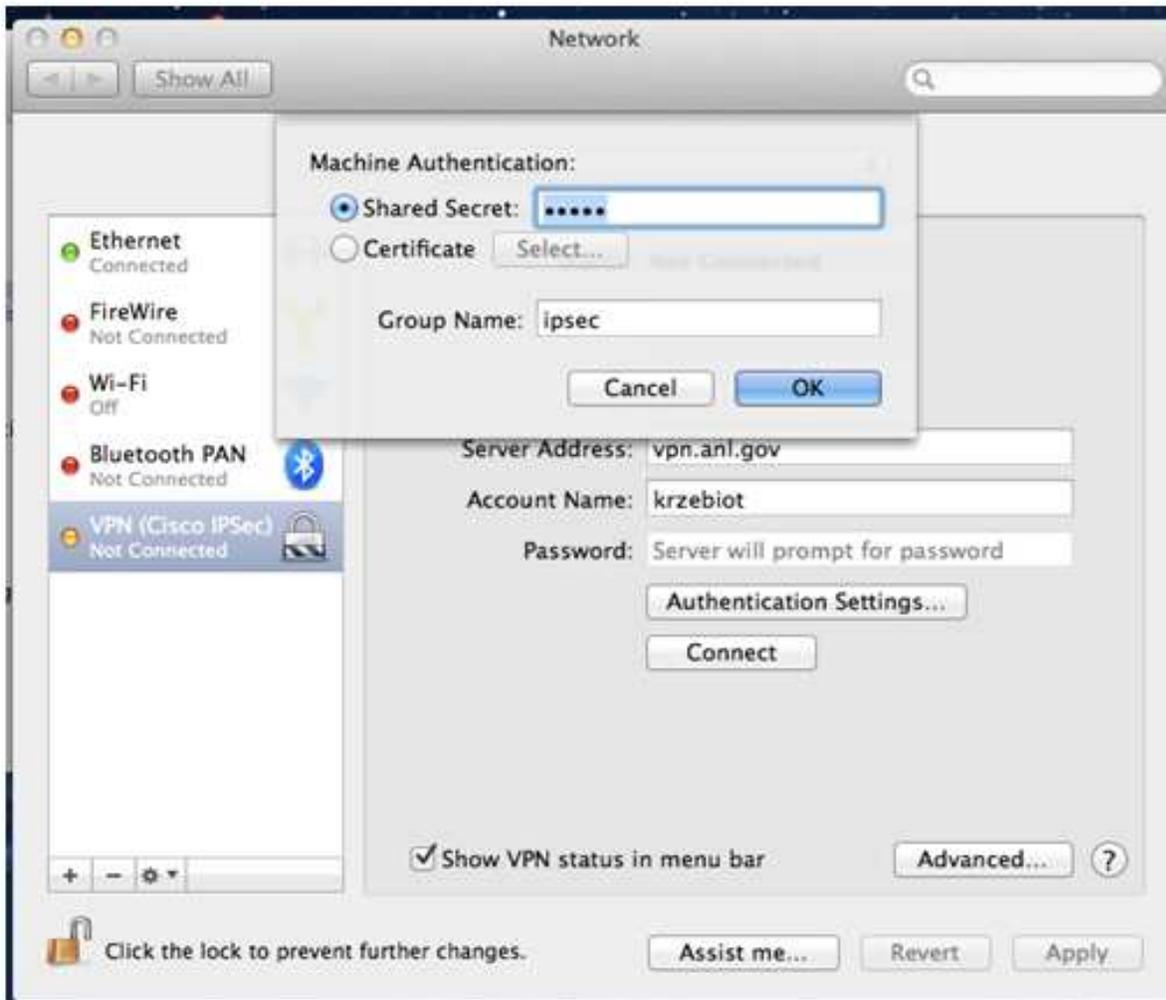

3. Give the service a name so that if you have more than one VPN connection, you will know which one to use. Click on the Create button.

4. Highlight the new service in the left column of the screen, and add the server address **vpn.anl.gov**. Enter your account name, and click on the Authentication Settings button.

5. Press the radio button for Shared Secret and enter: **ipsec**. The group name is also **ipsec**. Click OK and make sure that “Show VPN status in the menu bar” is checked.

6. Click on the new icon in the menu bar. The dropdown menu will allow you to connect to the VPN.
